Declaration of originality and responsible use

1. I, NIWENIRINGIYE Christian, registration number 25/27889 (institutional username ug25/27889@ines.ac.rw), declare that this submission (AI_A2_2527889, verification code AI-A2-7889) is my own individual work for the Artificial Intelligence project.

2. The dataset is synthetic and was generated by my own script from the seed 7889; I did not edit the CSV by hand.

3. I used Claude (Anthropic) to help debug the project and organize and improve its PDFs; it did not generate the project code. GitHub Copilot (Copilot SDK in VS Code) helped check assignment requirements, update README and cache exclusions, run the pipeline, prediction examples and tests, regenerate pipeline artifacts and PDFs, and publish the project snapshot. It also updated the existing evidence-PDF script to correct this AI attribution. How AI tools were used is recorded in evidence/AI_USE.md.

4. I have run the system, reviewed the code and the outputs, and I can explain my model choices and interpretations and make a small change to my own code.

5. I wrote or rewrote the interpretation of one regression error, one classification error and one cluster in my own words.

6. The project contains no passwords, tokens, private keys, virtual environments or unrelated datasets.
